ProbeGRPO: probe activity and rollout cost
GRPO
Random-B2
Surprisal-B2
LinearUCB-B2
A Valid probes
Valid probes / update
Optimizer step
B Extra probing cost
Probe tokens / update
Optimizer step
C Applied turn-local credit
Sum of absolute token credit
Optimizer step
D Validation versus rollout cost
Success (%)
Training rollout tokens (thousands)
Means across seeds 17, 42, 101; shading = sample SD (n=3); no smoothing.
Cost counts training main + probe generation only; evaluation generation is excluded.
